

## COMPANY PROFILE

**Be Power** is a high-tech company that was set up with the aim of playing a leading role in the radical transformation under way in the energy sector by bringing together, through innovative management of digital flows, the new activities of the energy market and the electric mobility sector. Be Power, through its subsidiaries Be Charge and 4energia, is active in charging services for electric vehicles, through a proprietary infrastructure spread throughout the territory, and in flexibility services to the national electricity grid by aggregating distributed energy resources (energy producers and consumers). The Group works on new market segments and addresses new categories of customers such as users of electric vehicles and potential providers of energy flexibility, offering new solutions, with a focus on Demand/Response services.

### **4Energia, a company dedicated to energy trading**

**4Energia** is an innovative player in the energy sector which, as a market aggregator, offers independent producers the chance to make the most of their energy by taking advantage of the opportunities in the markets. The contractual solutions with which 4Energia addresses its stakeholders are characterised by a high degree of flexibility and adaptability to different needs. In the field of energy transition, 4energia aims at the growth and integration of previously distant areas such as power generation, energy storage, demand response and electric mobility, transforming the classic activities of Portfolio Management and Energy Trading carried out by traditional utilities, and declining them according to the principles of digital automation.

### **Be Charge, integrated operator for electric mobility**

**Be Charge** is a company of the Be Power SpA Group dedicated to the diffusion of charging infrastructures for electric mobility. Its mission is to play a leading role in the radical transformation underway in the energy sector by bringing together, through innovative management of digital flows, the new activities of the energy market with the electric mobility sector.

Through one of the largest and most capillary networks of public charging infrastructures for electric vehicles in Italy, Be Charge aims to make a decisive contribution to the development of a sustainable mobility system. At the moment, there are more than 4,000 charging points distributed throughout the country: the stations are smart and user-friendly, monitored 24 hours a day by a help desk and accessible via a mobile application.

As part of the industry chain, Be Charge is both the manager and owner of the charging infrastructure network (CPO - Charge Point Operator), and the provider of charging and electric mobility services that interface with users of electric vehicles (EMSP - Electric Mobility Service Provider). Be Charge's charging stations are Quick (up to 22 kW) in alternating current, Fast (up to 150 kW) or HyperCharge (above 150 kW) in direct current.

## **Be Charge - Technology at the service of users**

Thanks to the completely redesigned Be Charge app, available for iOS and Android, users can enjoy a fluid, immediate and digitalised experience, ready to respond to the new needs imposed by the evolution of electric mobility.

Registering is now even easier, thanks to the new interface that allows users to filter Be Charge and partner charging points according to various parameters, such as power in kW, availability and 24-hour accessibility. With the new app you can also set your favourite charging stations, select your battery level during charging for more accurate charging estimates and manage your battery vehicles in a completely redesigned and improved section.

## **Future goals**

Be Charge's business plan envisages the installation of around 30,000 charging points over the next few years, which will supply 100% green energy from renewable sources. The company is constantly committed to speeding up the transition to an aware and sustainable mobility, also through investments to exponentially expand its charging network.
