Be Charge is an integrated operator for electric mobility.

Be Charge is a company controlled by **Plenitude** through Be Power dedicated to the dissemination of charging infrastructures for electric mobility. Thanks to one of the most widespread networks of public charging infrastructures for electric vehicles in Italy, Be Charge wants to make a decisive contribution to the development of a sustainable mobility system through the innovative management of digital flows. To date, all the energy supplied by its network is certified renewable.

Within the industry supply chain, Be Charge plays both the role of owner and manager of the charging station system (CSO – Charging Point Operator), and that of a provider of charging and electric mobility services that interface with users of electric vehicles (EMSP - Electric Mobility Service Provider). The Be Charge charging stations are alternating current, **Quick** (up to 22 kW) and direct current, **Fast** (up to 99 kW), **Fast+** (up to 149 kW), and **Ultrafast** (above 150 kW).

At the moment Be Charge has over 10,000 charging points nationwide. The stations are monitored 24 hours a day by a support service and are accessible through the Be Charge app, available for iOS and Android that allows you to filter The Be Charge and partner charging points based on parameters such as power in kW, availability and accessibility 24 hours a day. Thanks to the interoperability agreements, more than 63,000 charging points can be used on the Be Charge app.
